PROFILE

Final-year engineering student at INPT. I build **secure, multi-tenant systems** and put them into production — from the authorization layer (Java 21 / Spring Boot, Keycloak, Cerbos, RBAC + ABAC) through to the pipeline that ships them (GitLab CI/CD, Kubernetes, Terraform, Prometheus / Grafana / Loki). Most recent platform shipped at **186 req/s** and a **79 ms p95**, with **729 tests** per pipeline, **5 client SDKs** and 2 applications live in production.

PROFESSIONAL EXPERIENCE

- **SYNERTIC — Casablanca, Morocco** 2-month internship
Backend & DevOps Engineering Intern — Auth-Service, multi-tenant SaaS platform June 8 – August 8, 2026
 - Designed and built a **multi-tenant authorization platform** (Java 21 / Spring Boot 4, PostgreSQL): identity delegated to **Keycloak**, policy decisions to **Cerbos**, **RBAC + ABAC** permissions and strict tenant isolation.
 - Built a complete **GitLab CI/CD** pipeline: **Kaniko** image builds, **Trivy** vulnerability scans, automated deployment and scheduled maintenance pipelines.
 - Deployed and operated the containerized platform on an **Oracle Cloud VM**: **Prometheus / Grafana / Loki** observability, deployment, backups and alerting automated with **Ansible**; performance validated by load testing.
 - Published **5 client SDKs** (TypeScript, Python, Java, .NET, Go) validated by shared conformance tests; integrated **2 client applications** into production.
 - Built a **React / TypeScript** admin console and a visual **BPMN** approval-workflow editor (**bpmn-js**, **Flowable** engine).
- **START-UP — France (remote)** 2 months · remote
Full Stack Developer Intern July – August 2025
 - Developed a complete **Campaign module** (8+ REST endpoints) using **NestJS**, **Prisma** and **MongoDB**: status management, business workflows and API security with **JWT** access and refresh tokens, within a collaborative **Git** workflow including supervisor code reviews.

PROJECTS

- **Pitstop — Cloud-Native Garage Management System** 2025
Stack: Docker · Kubernetes · Argo CD · Istio · Terraform · AWS EKS/RDS · GitLab CI/CD [View project](#)
 - Containerized a microservices architecture (Node.js, Vue.js, RabbitMQ, MySQL) with multi-stage Docker builds, **GitOps** deployment to **Kubernetes** via **Argo CD** (Deployments, StatefulSets, RBAC, ResourceQuota, PodDisruptionBudgets) and the **Istio** service mesh (mutual TLS, identity-based AuthorizationPolicy).
 - Built a DevSecOps **GitLab CI/CD** pipeline (secrets → build → scan → deploy): secret detection (**Gitleaks**), SAST/quality gate (**SonarQube**), container vulnerability scanning (**Trivy**), DAST (**OWASP ZAP**); secrets managed via **Sealed Secrets**, namespace-scoped RBAC and etcd encryption at rest.
 - Full observability stack (**Prometheus**, **Grafana**, **Loki**) used to diagnose a real cluster-overload incident; deployed to **AWS EKS** via **Terraform** (VPC, IRSA, RDS, Application Load Balancer), with a cost guardrail (AWS Budgets).
- **MedCore — Microservices-Based Clinic Management System** 2026
Stack: Spring Boot · React · Docker · PostgreSQL · Spring Cloud Gateway · Eureka · Keycloak [View project](#)
 - Designed a platform covering the full outpatient-clinic workflow: patient and appointment management, billing, prescriptions and laboratory results, powered by **6 domain microservices** behind a **Spring Cloud Gateway** with **Eureka** discovery, **OpenFeign** and **Resilience4j** circuit breakers.
 - Secured the platform with **Keycloak / OpenID Connect** (Authorization Code + PKCE) and three-layer authorization: gateway role rules, JWT validation in every service and claim-based record ownership checks.
 - Built a **React** interface tailored to **7 roles**, with server-state management through **TanStack Query**, a hosted demo reproducing authorization and workflows without the back end, and **149 tests** (92 front-end / 57 back-end).
- **MedReminder — Medication Adherence Application** 2026
Stack: NestJS · Prisma · MongoDB · Socket.IO · Bull/Redis · React · Docker [View project](#)
 - Medication-adherence application for chronic patients whose core logic runs **without a user request**: reminders scheduled through a **Bull queue on Redis** (retries, backoff and failure handling delegated to the queue), real-time delivery over **Socket.IO**, and an email fallback path.
 - **NestJS / Prisma / MongoDB** backend with **JWT** authentication (Passport), a **React / Tailwind / Vite** front end and an adherence dashboard, fully containerized with Docker Compose.

EDUCATION

- **Institut National des Postes et Télécommunications (INPT)**
Engineering Degree — Ubiquitous and Distributed Systems, Cloud & IoT specialization
 - **CPGE Ibn Timiya**
Two-year intensive preparatory program in Mathematics and Physics — MPSI / MP

Sep. 2024 – Jun. 2027
Rabat, Morocco

Sep. 2022 – Jun. 2024
Marrakesh, Morocco

TECHNICAL SKILLS

- **Backend :** Spring Boot 4, Spring Security (OAuth2 Resource Server, JWT), Hibernate/JPA, Flyway, Flowable 7 (BPMN), NestJS, Node.js, REST, OpenAPI/springdoc, gRPC
- **Security & IAM:** Keycloak 26 (OIDC, Admin API, Organizations), OAuth2 Authorization Code + PKCE, sessions BFF, Cerbos (PDP, politiques CEL), JWT, RBAC, ABAC
- **DevOps & Cloud:** Docker & Compose, GitLab CI/CD, Kaniko, Argo CD, Istio, Gitleaks, SonarQube, Trivy, OWASP ZAP, Ansible, Terraform, Helm, Kubernetes, nginx (TLS), Linux/Ubuntu | **Oracle Cloud** | **AWS** (EKS, EC2, S3, RDS, ALB, VPC, IAM/IRSA, CloudFormation)
- **Observability & Testing:** Prometheus, Grafana, Loki, Promtail, Alertmanager
- **Databases:** PostgreSQL 16, MySQL, MongoDB, Redis, Prisma ORM
- **Frontend:** React 19, TypeScript, Vite, Tailwind CSS, Next.js
- **Languages:** Java 21, TypeScript, JavaScript, Python, SQL, Bash, C/C++
- **Concepts:** Microservices, API Gateway, CI/CD, DevSecOps, BPMN, distributed architecture

CERTIFICATIONS

- **Oracle Cloud Infrastructure Foundations Associate**
- [View Oracle Certification](#) · October 2025
